NEW PRODUCT UPDATE FOR ALL OUR CUSTOMERS ALL NEW XANTREX LINK LITE AND LINK PRO BATTERY MONITORS TWO GREAT MONITORS TO PROVIDE A WINDOW TO YOUR BATTERY BANKS

Knowing your battery status is an essential part of good battery maintenance, and Xantrex now makes it even easier with the launch of two next generation battery monitors designed for the mobile market. The Xantrex LinkPRO Battery Monitor, a high-performance monitor, and the Xantrex LinkLITE Battery Monitor, an affordable alternative, both accurately and easily provide users with key battery data at a glance. Both Battery Monitors give users the ability to easily read their battery bank like a fuel gauge, providing fingertip access to voltage statistics, battery capacity, charge and discharge current. Users can view all of these details on a clear, backlit LCD display, with instant recall available by simply pressing a button. Another great feature is the internal programmable alarm relay that runs a generator or external alarm when needed, or automatically turns off devices when the battery voltage exceeds programmable limits. These monitors feature an easy-to-install design with a round bezel.

xantrex[™]
 Smart choice for power[™]

LinkLITE

The Link LITE selectively displays battery voltage, charge- and discharge current, consumed amphotours and remaining battery capacity. Using a large clear backlit LC Display and an intuitive user interface, all parameters can be recalled with just a button press.

The basic Link LITE is the perfect instrument for users that are only focussed on accurate state of charge readout and easy setup. Although the Link LITE has less features than the Link PRO, it still does contain the very accurate measurement and calculation systems of the Link PRO. The Link LITE's direct button access will be appreciated by the less technical users.

The potential free alarm relay enables you to run a generator when needed or to turn off devices when the battery voltage exceeds programmable boundaries.

LinkPRO

The Link PRO selectively displays battery voltage, charge- and discharge current, consumed amphotours, remaining battery capacity and time remaining. Using a large clear backlit LC Display and an intuitive user interface, all parameters can be recalled with just a button press.

The Link PRO replaces the industry standard Xantrex Battery Monitor and adds many innovative features like a second battery input, a shunt selection feature, storing a wide range of history events and extensive alarm relay programming. This is the monitor for serious users.

The potential free alarm enables you to run a generator when needed or to turn off devices when the battery voltage exceeds programmable boundaries.

Key Differences Between Link LITE & Link PRO

500amp / 50mV Shunt
 included with each
 monitor standard

Feature List of Available Models	Link LITE	Link PRO
Number of Battery Bank Inputs	2 (1 full monitoring, 1 voltage only)	
Maximum operating current	+ / - 500Amps	
State of Charge Bar	Yes	Yes
Potential Free Alarm Contact	Yes	Yes
Time Remaining Readout	No	Yes
Temp Sensor Input	No	Yes
Optional PC Communication Interface	No	Yes
Historical Data Storage	No	Yes
Extensive Alarm Output Programming	No—only State of Charge	Yes on all functions
